Flashide Inu is a cryptocurrency with a total supply of 100 billion tokens. However, it has already burned 13.4% of the total supply and a further 50% will be burned on the given dates. This unique burning mechanism is designed to reduce supply and potentially increase token value. Additionally, Flashide Inu has allocated 10% of tokens to exchanges, LP pools and bridges securely held in the multisig account "0xdA81E48FbbC0e37E440308956B2930cA24727F81". This shows the solid foundations of the project and the resources available for future developments. The remaining supply is in circulation, allowing users to trade and use the tokens for various purposes.
